THREE ESSAYS ON JOB SEARCH METHODS AND SEARCH OUTCOMES
   Author: FLORENCE, CURTIS SAMUEL, II
   Degree: PH.D.
   Year: 1997
   Corporate Source/Institution: THE UNIVERSITY OF NORTH CAROLINA AT CHAPEL

     This dissertation is comprised of three essays that examine the
relationship between job search methods and job outcomes for unemployed
workers. All three essays utilize data from a sample of unemployed young
men in the 1986 panel of the National Longitudinal Survey of Youth. The
first essay examines job search choices and outcomes over time. Forty-nine
percent of searchers who are unemployed for more than one month change the
job search methods they use during an unemployment spell. Estimates of the
arrival rate of job **offers** suggest that searchers **choose** methods
systematically by starting with the most productive methods and then adding
less productive methods. However, searchers who use public employment
agencies after trying other methods first have shorter jobless duration
than other searchers. This suggests that public employment agencies may be
a productive method for searchers if they are not initially successful in
finding a job with other methods.
     In the second essay I estimate two models of job search outcomes that
control for the endogeneity of search choices. The first model jointly
estimates equations for search method use and the arrival of job offers.
The second model jointly estimates equations for search method use, the
receipt of unemployment insurance, and the hazard rate for exit from
unemployment. The results show that private employment agencies, personal
contacts, newspaper **advertisements** and direct applications increase the
number of job offers. However, personal contacts and direct application are
the only methods that decrease jobless duration. Receiving unemployment
insurance increases jobless duration by almost three months.
     In the third essay, I estimate the effect of job search choices on
subsequent job quality. The results reveal several interesting
relationships between search methods and job quality. Using public
employment agencies has a negative effect on the starting wage and wage
